

CVEP

Your strategic partner for integrated solutions for
electronic units and electrical components

About Us

CVEP GmbH advises its customers, according to the company philosophy, covering several product areas and makes the latest technologies and designs available, for OEM, subcontractors and retailers. The customer is in this way always up-to-date on the latest market developments in many fields.

The variety of products that can be offered as manufacturer, sales representative as well as retailer gives customers a lot of advantages and reduces the time spent searching for new products and applications. All our components meet the required quality standards for OEM applications. Our suppliers are certified and have many decades of market experience.

We can rely on a strong network of service providers and manufacturers both in Europe and Asia.

The quality of the products we receive from Asia via our German partner in the Shanghai area is constantly under review and the suppliers are carefully chosen in advance to meet the high requirements of our customers.

Let us convince you of the advantages of our integrated solutions!

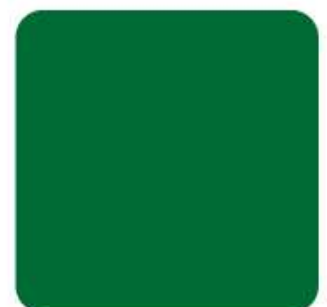

+ Automotive fuses

CVEP GmbH offers the complete product range of:

Blade fuses, micro fuses, Continental fuses and strip fuses. Ranging from Mini Fuses and Standard Fuses to Power Fuses, you will find every type of fuse, including automatic circuit breakers for automotive applications.

+ Accessories for automotive fuses

Fuse holders for various applications, including universal fuse holders, PCB fuse holders, strip fuse holders or central electric boxes, you can find it all in our portfolio.

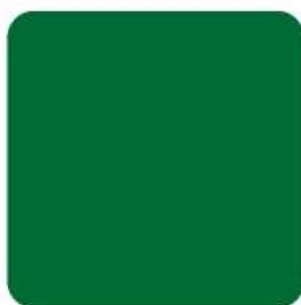

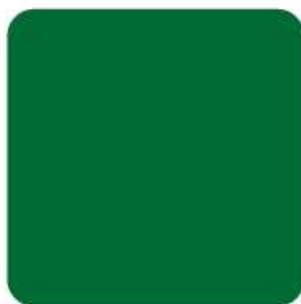

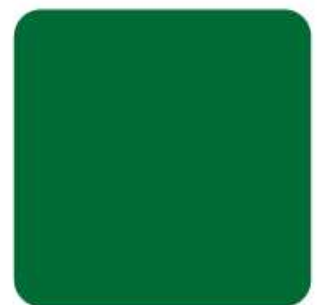

+ Relays, relay sockets, reversing alarms

CVEP relays are used in a large number of vehicle-specific applications and ensure the proper functioning of e.g. indicators, lights etc. when the application is triggered in the vehicle. We offer you a comprehensive assortment of mini relays, solid state relays, power relays, timer relays, special relays and many more.

CVEP GmbH can also realise customer-specific relay applications.

The variety of relay sockets with a number of possible combinations and the corresponding terminals complete the range of relays for our customers.

+ Auxiliary parts for wiring harnesses and cabling assembly

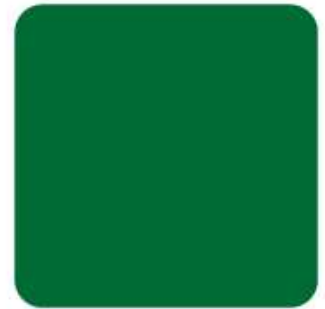

A large number of small parts such as two-pole and multipole connectors, conduits and adapters, automotive sockets, rubber caps etc. are available for all applications. Blade terminals and receptacles as well as connector housings in many different designs are part of the product range for wiring harness makers.

+ Automotive switches, buttons, indication instruments, CAN-technology

We offer a technically up-to-date and design-oriented range of vehicle switches and indication instruments with a multitude of technical possibilities regarding illumination, symbols, colours, shapes and much more.

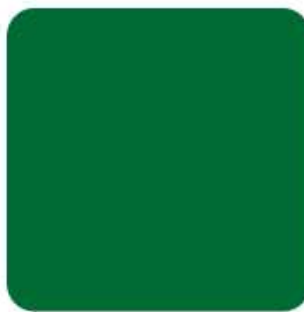

Can-key pads with LED-illumination are available with 4 / 6 / 8 and 12 fields and lasered symbols, as well as CAN-modules in different sizes and technical configurations (number of inputs and outputs).

+ Special solutions

As a system supplier of electrical products for the commercial vehicle industry we also offer customer-specific solutions by request. According to your specifications we are able to develop complex central electric systems as PCB, modules, distribution boxes and others, whatever is required by the market and our customers.

+ Battery disconnection switch

Battery disconnection switches are mainly used with commercial vehicles to deenergize cables, e.g. starter cables or circuits for fuse boxes. This is for safety reasons as such cables are still under voltage despite removal of the ignition key, and they are not protected with separate fuses. This may result in cable fire or a short circuit.

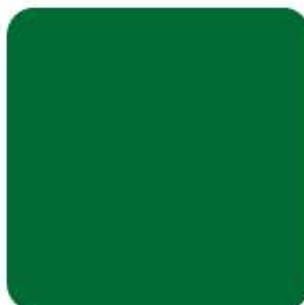

+ Vehicle lighting

In the commercial vehicle sector, lighting includes LED headlights, working lights, beacon lights, interior lighting through to modern LED lamps of all kinds.

+ Steering Columns

Our strategic partnership with an Italian manufacturer of steering columns completes our portfolio. This enables us to offer our customers a wide range of steering columns, i.e. starting with low-cost rigid systems to pedal and single-lever adjustment and telescopic solutions through to electrical adjustment mechanisms.

The major advantage of our steering columns is the flexibility provided by the modular design and the high level of quality. MTA's innovative range of indication instruments together with our product portfolio enable us to meet all customer requirements regarding specification and individuality.

CVEP GmbH - Our products and services

Automotive fuses

Relays and sockets

Automotive switches

Vehicle lighting

Vehicle connector sockets

Conduit systems - conduits/adapters

Plugs and socket connectors

Connector housings

Customised solutions

Indication instruments

CAN-technology

Steering columns
